

## **Advanced Communications Launches Program to Help Local Businesses Go “Green”**

*Latest Advancements in Technology Enables Companies to Reduce Their Carbon Footprint While Enhancing Employee Productivity*

MORRISTOWN, TN — May 27, 2009 — Advanced Communications, an industry leader in unified communications, announced today that the company is launching a program to help businesses in their efforts to go “green”. The latest advancements in communications technology have enabled companies to dramatically reduce their carbon footprint, while at the same enhance employee productivity and increase operational efficiency. Advanced Communications has made a strategic business decision to highlight the types of technology that impact the environment and the community in a positive manner. The objective is to bring awareness to technology that supports business processes resulting in an organization’s pursuit to become environmentally friendly.

“Lowering an organization’s carbon footprint not only makes sense for the environment, but it also makes perfect business sense,” said Terry Fishburn, President of Advanced Communications. “The world has a fixed amount of natural resources - some of which are already depleted. So as population growth greatly strains our finite resources, there are fewer available. By making the right “green” decisions companies have the ability to reduce cost, retain and hire better people, and save time. As a company we are passionate about technology and the huge difference it can make, not only on our environment but also in our lives as well. “Green” technologies are proven to work and are being used by companies around the world. Unfortunately, most small to mid-sized businesses are not familiar with it and don’t even realize

how to proceed. It is our job to show them the way.”

Advanced Communications has been helping companies go “green” for quite some time through a host of technologies. For example, Voice over Internet Protocol (VoIP) plays a critical role in giving businesses the ability to deploy a remote workforce. Unlike regular phone service, VoIP conversations are transformed into digital information and sent over a broadband data network. VoIP calls connect to a server where voice information is truncated into packets and sent across the Internet bypassing the long distance carrier altogether. This essentially means that VoIP callers do not use traditional phone lines and can avoid expensive long-distance charges. Most importantly, this technology enables companies to create a “virtual office” anywhere they want. Employees have access to their company’s LAN and can conduct business as if they were physically on site. “With commute times ever increasing, the cost of gas and harmful emissions, implementing a telecommuting company policy makes sound business sense,” added Mr. Fishburn.

In addition, IP video conferencing is a phenomenal technology that has recently experienced significant advancements making its adoption cost effective for small to mid-sized businesses. As the costs of both video conferencing and high speed Internet access continue to fall, video conferencing systems are being used more extensively than ever. IP video conferencing eliminates the need for many traditional face-to-face meetings. This not only impacts energy but also reduces travel costs and employee time associated with long business trips. Furthermore, communications manufacturers are including video monitors in office phones so on the fly meetings occur through ease of use and immediacy.

Fax machines have been around for years; however, today there is a better way of transferring critically important documents. Fax to email eliminates the need for a fax machine altogether, thus, reducing the need for physical hardware, paper, ink, and the energy utilized to run it. Email faxing is more efficient because it enables one to forward, archive, or delete the fax. Plus, it better supports the virtual office environment.

“As consumers become more environmentally conscious and energy costs continue to rise, businesses are rapidly adopting environmentally friendly business practices,” commented Mr. Fishburn. “Many business owners fear it’s too costly to adopt eco-friendly practices; however, small investments can reap large gains. Green practices can save money, while creating happier customers and a healthier community. Communications technology is an area where everybody wins and we’re excited about educating our customers on this topic.”

### **ABOUT ADVANCED COMMUNICATIONS**

Advanced Communications, Inc. is a full-service, telecommunications company serving customers throughout East Tennessee. Since 1985, Advanced Communications has experienced strong, continual growth as the company evolved into the region’s telecom leader. The company is dedicated to providing businesses of all sizes with innovative technology solutions that increase profitability, enhance employee productivity, and give them a competitive advantage in their marketplace.

Advanced Communications offers an array of voice and data solutions from industry leading manufacturers including Toshiba, ShoreTel, and ESI. Additionally, Advanced Communications provides businesses

with a variety of comprehensive Partner Protection Plans designed to ensure quality system performance and exceptional technical support delivered by factory certified and highly skilled technicians. Advanced

Communications also provides connectivity services as an Authorized AT&T Solutions Provider. For over twenty years, Advanced Communications has offered services 24 hours a day, 7 days a week with

emergency service guaranteed within 2 hours. For more information about Advanced Communications call (423) 586-8624 or visit [www.aci-tn.com](http://www.aci-tn.com).
